SWANAGE URBAN DISTRICT COUNCIL

ANNUAL REPORT

of the

MEDICAL OFFICER OF HEALTH

FOR THE YEAR

1963

Digitized by the Internet Archive in 2018 with funding from Wellcome Library

Public Health Office, Health Centre, Swanage, Dorset.

To the Chairman and Members of the Swanage Urban District Council.

Mr. Chairman, Ladies and Gentlemen,

I have the honour to present to you my Annual Report on the health and sanitary conditions of the Swanage Urban District for the year 1963.

The report is set out in sections in the following order:-

			Pa	ge	s
Statistics			1	-	2
Sanitary Circumstances	• • •	6 6 6	3		5
Sanitary Inspection		٠.	6	-	7
Inspection and Supervis	sion of Food	• • •	8	-	9
Housing		• . 0			10
Prevalence and Control	of Infectious	Disease	11	-	12
Factories Act	• • •	• • •			13
Climatic Data	• • •				14

The health of the district, generally speaking, remained satisfactory throughout the year, and there was an absence of cases of serious infectious disease.

The vital statistics for the district compare favourably with those for the Country as a whole. The number of deaths registered during the year exceeded the number of live births by twenty-two.

The area comparability factors for birth and death rates given in the report make allowance for the variations in sex and age groups, and in the case of death rate takes account of residential institutions in the area. They are used to multiply the respective crude birth and death rates of the area so as to make them comparable with the rate for the Country as a whole. Undue importance should not be attached to the rates in the report which are based on very small numbers.

This is my twenty-sixth and last annual report to the Council before my retirement, and I take the opportunity of thanking all Members for their kindness and consideration, the Clerk of the Council and other Officials for their unfailing help and co-operation throughout a period of service which has been a very pleasant one for me.

My thanks are also due to Mr. Greenwood, your Public Health Inspector for his assistance in preparing this report.

I have the honour to be,
Your obedient Servant,

E. J. O'KEEFFE

Medical Officer of Health

August, 1964.

PUBLIC HEALTH OFFICERS

Medical Officer of Health

E. J. O'Keeffe, B.A., M.R.C.S., L.R.C.P., D.P.H.,

Public Health Inspector

K. W. Greenwood, M.A.P.H.I., Certified Meat and Food Inspector

Office accommodation and clerical assistance for the Medical Officer of Health, who is also Medical Officer of Health for the Wareham Borough and the Wareham and Purbeck Rural District, and Senior Assistant County Medical Officer, are provided jointly by the Authorities concerned.

The Public Health Inspector in addition to his statutory duties is also the authorised officer under the Pet Animals Act.

The Works Committee of the Council deals with all matters concerning public health.

SANITARY CIRCUMSTANCES OF THE AREA

WATER SUPPLY

The Poole and East Dorset Water Board which came into being on the 1st. April, 1960, control the public piped water supply in the district.

Particulars supplied by the Poole and East Dorset Water Board

I am indebted to the Board's Engineer and Manager for the following information with regard to the water supply -

The Board's southern district comprises the Urban District of Swanage, the Borough of Wareham and the Rural District of Wareham and Purbeck. The water supplied derives from wells and boreholes at Briantspuddle, Worgret, Bloxworth, Corfe Castle, Ulwell and Church Knowle.

Water for Swanage Urban District is supplied from the Corfe Castle and Ulwell sources.

Details of Sources and Treatment Applied

Source	Type of Source	Depth of Well	Treatment Applied
Corfe Castle	Well	17 feet	Slow sand filtration, chlorination and post ammoniation.
Ulwell	Well	450 feet	Chlorination.

During the year the Board abstracted the following quantities from these sources.

Source	Volume of Water into Supply
Corfe Castle	144,587,000 gallons
Ulwell	55,531,000 gallons

The water was maintained at a high standard of purity and was sufficient to meet all demands.

During the year 5 samples were taken from consumers' taps by the Public Health Inspector for the Urban District for bacteriological examination at the Public Health Service Laboratory and the following results were reported:-

Local Authority Area	Total Number	M.O.H. Classification(Report 71)
	of samples	1 2 3 4
Swanage Urban District	5	5 0 0 0

Regular bacteriological examinations of raw and treated water were made in the Board's laboratory giving the following results:-

Chemical Analyses

Frequent checks of chlorine residual are made in the control of treatment plants and in samples taken from mains and consumers' taps throughout the area of supply. Chemical analyses of the raw water from each source was carried out.

Sewerage and Drainage

The Town's sewage, with the exception of the Durlston area, is discharged untreated into the sea in deep water off Peveril Point.

No evidence of nuisance has been observed or reported within the district or neighbouring districts as a result of this method of disposal.

Sewage from the Durlston area is discharged separately into deep water in Durlston; here the temporary outfall sewer, which replaced the outfall damaged by a landslide, functioned satisfactorily except for a short period during rough weather when it suffered some damage. It is hoped that during 1964, some progress will be made in getting the scheme under way for abolishing the outfall sewer at Durlston Bay.

Surface water is drained mainly into the Swanage and Ulwell streams or directly on to the foreshore. In some areas, however, surface water is discharged into the sewers. This latter method is discouraged so as to relieve pressure in the soil sewers. During periods of heavy rainfall the Swanage stream is liable to overflow and cause flooding of houses in the Eldon Terrace area; no flooding occurred during 1963.

Statutory and Informal Notices (Public Health Acts, Housing Acts and Factory Act)

The following table shows the action taken to secure the abatement of nuisances and the removal of conditions dangerous or injurious to health -

Notices	Number served	Number complied with.	Outstanding
Informal	207	200	7
Statutory	Nil	Nil	Nil

Disinfection

There is no steam disinfection in Swanage, but where this type of disinfection is considered necessary articles of clothing and bedding are taken to the Alderney Hospital, Poole, to undergo high pressure steam disinfection. Spray and fumigant disinfection is carried out by the Council's staff.

Verminous Premises

There were 3 cases of serious infestation of premises during the year and Council employees carried out the work of disinfestation and cleansing. All these cases occurred in premises occupied by elderly persons living alone. This again emphasizes the need for adequate housing of the elderly with proper welfare amenities.

Refuse Collection

A weekly collection of refuse is made throughout the town. An additional collection is made during the summer from the larger hotels, cafes and restaurants. This collection is not chargeable and is in addition to any collection made by agreement with occupiers.

Refuse Disposal

The disposal of refuse is carried out by controlled tipping in disused quarry workings. This is a relatively cheap and satisfactory method of disposal. It is, however, essential that precautions be taken to prevent the tip from catching fire, otherwise a serious nuisance will arise.

Clean Air Act, 1956

It was not found necessary to take action for the abatement of smoke nuisance in the area during the year.

Caravans and Camping Sites

Improvement work has continued on all caravan sites during the year so that they will conform with the requirements of the Caravan Sites and Control of Development Act, 1960.

There are 8 licenced sites in the district capable of accommodating 719 caravans. In addition the Council's Municipal Caravan Site provides for a further 201 caravans. The conditions of all sites only permits their use between April and September. There are no caravans in the district which are occupied as permanent dwellings.

Public Conveniences

There are three public conveniences on the sea front all of which are provided with washing facilities including the provision of hot water. In the conveniences where there are no permanent attendants hot water is provided by coin meters. It is regretted that in these conveniences certain sections of the public damage these amenities and thus endanger the health of the community.

INSPECTION AND SUPERVISION OF FOOD

Milk Supply

All milk sold by retail in the district is either pasteurised, tuberculin tested pasteurised or tuberculin tested, since the Swanage Urban District is part of a special area under Section 37 of the Food and Drugs Act, 1955.

There are two registered dairies and two registered milk distributors in the district.

Milk Sampling

Forty-two samples of milk were taken in the district by the Food and Drug Authority during the year and all samples passed the statutory tests.

Ice-Cream

The majority of ice-cream retailed in the district is pre-packed. There are two manufacturers of soft ice-cream in the town.

Supervision of premises was maintained during the year and twelve samples were submitted for the methylene blue reductase test in accordance with the Ice-Cream (Heat-treatment) Regulations, and the following results were obtained -

	nal Grades	Number of Samples taken
Grade	1	6
11	2	3
11	3	1
11	4	2

Food Premises

Swanage, as in most holiday towns, has a large proportion of premises that are used for catering, ranging from the odd household doing occasional bed and breakfast to the large hotel or restaurant.

Generally speaking, the premises are satisfactory and comply with the Food Hygiene Regulations, although at times it is necessary to take informal action to remedy unsatisfactory premises. However, the main danger to the public's health in catering and retail food premises is the food handler. Unfortunately no regulations can, in practice, effectively prevent dirty habits and faulty personal hygiene. Thus constant care and attention to a most scrupulous degree in personal cleanliness and hygiene is the true safeguard against disease spread by food contamination.

Slaughter Houses

There are no slaughter houses in the district, all meat being slaughtered elsewhere and conveyed to the town in properly conducted meat vans.

Inspections of meat delivery vans are carried out together with inspection of meat on arrival as well as during sale.

HOUSING

Compared with most towns, Swanage is fortunate in not having any typical slum dwellings. In fact there are only isolated properties that might possibly come within the scope of the Housing Act 1957. There are, of course, many houses that lack the modern amenities of indoor sanitation, bathroom and hot water supply. However, there is no Act that requires owners to provide these modern amenities that one would expect to find in houses in 1963. Some owner occupiers do avail themselves of the provisions of the Housing Act relating to Standard Grants, but unfortunately very few landlords.

Probably quite a few of the 158 persons on the Council's waiting list for accommodation would, if it were not for the high price of property in Swanage, purchase their own house. Especially is this so with many young couples who are at present living with relatives or occupy furnished flats during the winter months. Living with relatives cannot be, by any means, regarded as satisfactory accommodation. With regard to living in furnished flats, insecurity of tenure and fear of eviction is an ever present problem. These furnished flats, or flatlets as many are called have become more common during the past year or so, as the tendency is for owners of guest houses to alter their premises so that holiday-makers may cater for themselves instead of being catered for by the proprietors. One must be mindful that very sub standard conditions may arise in dwellings used for this multiple Section 15 of the Housing Act, 1961 gives power to local occupation. authorities to require the execution of such work as may be necessary to remedy these conditions. Unfortunately, no minimum legal standard is laid down in the Act, although the Council did approve a suggested minimum standard of facilities which they regard as being reasonably suitable.

The need for houses for elderly persons and welfare housing has been mentioned in previous Annual Reports. The proper housing of elderly persons, which will permit of them being cared for adequately in their declining years in familiar surroundings and amongst people they know, is a problem which becomes increasingly pressing.

PREVALENCE AND CONTROL OF INFECTIOUS DISEASE

There was no serious case of infectious disease notified in the district during 1963.

Measles were more prevalent during the year; notifications were 78 compared with 10 in the previous year. The only other infectious diseases notified were 4 cases of acute pneumonia and one new case of respiratory tuberculosis.

There is no doubt that the high percentage of young children immunised against poliomyelitis, diphtheria and whooping cough is mainly responsible for the absence of these diseases.

Immunisation

Schemes for immunisation are administered in the area by the County Council as the Local Health Authority. Immunisation against diphtheria, whooping cough, tetanus and poliomyelitis is carried out at the Infant Welfare Centre on the first and third Friday every month from 2 - 4 p.m.

Immunisation is also carried out by the Medical Practitioners in the area including immunisation against smallpox.

. Immunisation with B.C.G. of the older age group children is carried out at schools in the area by the medical officers of the Local Health Authority.

Poliomyelitis Vaccination

The scheme for immunisation against poliomyelitis includes all ages up to 40 years, and certain priority groups who are likely to be exposed to special risk of infection.
